DETAILED ACTION

Claim Objections

1. Claim 1 recites the limitations "the sheet piece" and "the paper leaf". There is insufficient antecedent basis for these limitations in the claims.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by USPN 4,543,139 to Freedman et al.
4. Freedman teaches a releasable closure (equivalent to sticker) for application to bags and containers. Figure 1A teaches two adhesives and a release liner of paper to be attached to bags and containers. See also col. 3, lines 1-15 and col. 5, lines 20-30.
5. Claims 1 and 3 are rejected under 35 U.S.C. 102(e) as being anticipated by USPN 6,503,620 to Xie et al.
6. Xie teaches various multilayer composite PSA constructions. Figure 3 describes two second adhesives (first and second adhesive layer on one end and on the other end) and a composite adhesive in between the two adhesives (an adhesive layer between first and second-

claim 3). There is an additional facestock of paper (paper leaf) adjacent to one of the second adhesives. A release liner is adjacent to the other second adhesive for removal of the label (functional equivalent of sticker). See also col. 1, lines 25-40 and col. 16, lines 22-59.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,503,620 to Xie et al.

Xie essentially teaches the claimed invention. Xie does not specifically disclose the width requirements (1/5 or more and 15 mm or more) of the second adhesive layer as recited in instant claims 2 and 4. However Xie teaches at col. 17, lines 45-58 adjusting adhesive layer geometries are dependent upon process conditions such as coating gaps of the die and also web speed. Hence it would have been obvious to one of ordinary skill in the art to modify the distance between the layers since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272. The gap of the die and web speed effect the distance between adhesive layers, including the second adhesive layer.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USPN 5,593,759 to Vargas et al. teaches a pressure-sensitive structural adhesive with two adhesive layers. USPN 5,718,958 to Scholz et al. teaches a repulpable PSA construction having multiple layers.
